Art Unit: 1652

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-26, drawn to a method for production of an enzyme using a plasmid in a host cell, classified in class 435, subclass 232.
- II. Claims 27-30, drawn to an enzyme, a test kit and a method for determining the presence, absence or quantity of citric acid, classified in class 435, subclass 4 and 232.

The inventions are distinct, each from the other because of the following reasons:

Group I and II are separate and distinct because group I involves the gene encoding the enzyme, and therefor its cloning, and Group II involves only the enzyme. The enzyme could be obtained from the natural source or could be made synthetically. Group I is in essence a product by process type claim involving using the gene to make the enzyme.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matter and the search required for Group I is not the same as required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles L. Patterson, Jr., PhD, whose telephone number is 703-308-1834. The examiner can normally be reached on Monday - Friday, 7:30-4:00.
